Dear Hiring Manager,

Hiring Manager

Human Resources  
Department

After winning several college events in programming and computer gaming while pursuing a degree in Mechanical Engineering, I later realized that software development is the field where I truly want to grow. Fortunately, after completing my bachelor's, I got the opportunity to work in an IT company, which became a key milestone in my career.

Handling complex projects at work and leading a sentiment-aware chatbot initiative at my university has shown how company culture and a strong focus on innovation can make a real difference. Opportunities that offer scalable solutions and encourage exploration of new technologies are exciting.

In my latest role as a Jr. Software Engineer, tackling complex problems and learning new technologies were central to every project. I contributed to the full lifecycle of a Java-based web application from gathering requirements and designing the system to developing, deploying, and maintaining it and was recognized for my strong problem-solving abilities.

Before pursuing my Master's, I was offered a position as an IT Analyst at Tata Consultancy Services. During my Master's, I honed skills in AWS, Python, AI/ML, and database design to deliver impactful user experiences.

Thank you for your time and consideration. My work experience and my bond with software development would make me an asset to your organization's internship program. I can be easily reached at your convenience by email ([shantanudeshmukh3@gmail.com](mailto:shantanudeshmukh3@gmail.com)) or by phone (813 340 9551).

Sincerely,

**Shantanu Deshmukh**
